

What is claimed is:

1. A structure of a tope cover of a clothes dryer, comprising:

a base forming a floor of a body;

a front cabinet 2 forming a front of the body;

a side cabinet 3 forming a side of the body;

a back cover 4 forming a back side of the body;

a top cover 5 forming a top of the body, the top cover comprising:

a predetermined curvature around the body in all direction;

a groove 510 provided along the body at a rear side of the top cover;

a prefabricated hook 600 provided on a front surface of the control panel,

and inserted to the groove 510; and

a fire wall 8 made of metal, and provided at a lower part thereof; and

a control panel 6 provided on a rear of the top cover 5.

2. The structure of the top cover of the clothes dryer of claim 1, wherein the fire wall provided at a lower part of the top cover is formed to have the same curvature as that of the top cover.

3. The structure of the top cover of the clothes dryer of claim 1, wherein the groove provided at a rear side of the top cover in left and right direction is comprised to have the same curvature as that of the top cover.
